United Field Services

Master IT Build Brief

Complete system specification for IT implementation: REO agent pipeline, HubSpot automation, MS platform integration, newsletter system, and sales playbook.

v1.1 — March 2026	Prepared for IT Department	Confidential

1. Executive Overview

United Field Services (UFS) is building an end-to-end REO agent acquisition, onboarding, and activation system. This document is the single source of truth for the IT department covering all systems that need to be built, configured, or integrated.

Primary Goal

Convert REO agent leads into active, ordering clients through a structured outreach pipeline, automated follow-up sequences, and a frictionless onboarding experience.

Secondary Goal

Keep all contacted agents engaged via a weekly REO industry newsletter (The Disposition Desk) that drives repeated portal logins and conversions over time.

Scope

Phase 1: REO agents only. Phase 2: expand to property management and HOA client types. All infrastructure should be built with Phase 2 in mind.

Systems involved: HubSpot CRM · MS Platform (client portal) · Mailchimp · Zillow (AI-powered REO lead detection & auto-capture system)

2. System Architecture

HubSpot is the system of record. The MS platform pushes registration, login, and work order events to HubSpot via webhook or API. HubSpot triggers automation workflows based on status changes. Mailchimp syncs audience from HubSpot for newsletter sends.

System	Role	Who Manages
HubSpot CRM	Master contact record, pipeline stages, automation workflows, task creation, suppression logic, Mailchimp sync	Sales / IT admin
MS Platform	Client portal — registration, email + phone verification, login tracking, work order submission, client data	IT / Platform team
Mailchimp	Email marketing — The Disposition Desk weekly newsletter, audience sync from HubSpot, segmentation by client_type	Marketing / IT
Zillow + AI Detection	Sole lead source — AI monitors Zillow for new REO listings, auto-captures agent data, pushes to HubSpot automatically	IT / AI system

3. Agent Status Categories

Every contact in HubSpot has a ufs_agent_status property. This field drives all automation logic. Status 1 (Active Client) is the terminal sales state — all sales outreach stops permanently.

#	Status	Definition	Action

1	Active Client	Has submitted 1+ work orders through the MS platform	⛔ STOP all sales emails. Operational comms only.
2	Registered & Logged In	Registered, verified, and logged into the MS portal at least once	Send activation sequence to drive first order
3	Registered, Not Verified	Account exists in MS system but email/phone not yet verified	Send verification nudge sequence
4	Not Registered	Lead in HubSpot only — no MS platform account	Send registration invitation + sales outreach

Status priority: Status 1 overrides everything. If a contact submits a work order at any point, they immediately move to Status 1 and all sales automation is suppressed regardless of which sequence they are currently enrolled in.

4. Lead Generation Sources

Architecture decision: All agent lead data flows exclusively through Zillow. No other external data platforms are used for lead sourcing. An AI-powered detection system monitors Zillow in real time and auto-creates contacts in HubSpot the moment a property hits the market as REO.

Lead Source: Zillow Only

Source	What It Provides	How It Enters HubSpot
Zillow (AI-monitored)	REO property listings — listing agent name, contact info, property address, MLS data, listing date	Automated — AI detection system pushes to HubSpot on listing creation
Manual Entry	Referrals, inbound inquiries, or agent contacts sourced outside Zillow monitoring	Sales rep creates contact manually in HubSpot

AI-Powered REO Detection System

How it works: When a property is listed on Zillow and is flagged as REO (bank-owned / foreclosure), the AI detection system automatically identifies the listing agent, extracts their contact data, and creates or updates the corresponding contact in HubSpot — without any manual intervention from the sales team.

Step	Action	System
1	Zillow listing posted — property flagged as REO / bank-owned	Zillow
2	AI detection system identifies new REO listing, extracts listing agent + property data	AI Build (Zillow API / monitoring)

3	System checks for existing HubSpot contact by agent email	HubSpot API
4	If new: create contact with ufs_agent_status = "Not Registered", lead_source = "Zillow", property details attached. If existing: update contact record with new listing activity.	HubSpot API
5	HubSpot enrolls contact in Status 4 outreach sequence. Sales rep auto-assigned.	HubSpot Automation

IT Build Required (Phase 1 Blocker): The AI REO detection system must be built and connected to HubSpot before the sales pipeline can operate at full capacity. See Section 13 for detailed requirements.

Lead Entry into HubSpot

- All AI-detected leads enter HubSpot automatically with ufs_agent_status = "Not Registered" and lead_source = "Zillow"
- Manual entries use lead_source = "Manual"
- Duplicate check runs on email address before creating contact (see Section 8)
- Sales rep is assigned automatically based on territory or round-robin

Phase 2 — Enhanced Data (Future)

Source	What It Provides	Phase
Indeed / Apify	Bank hiring intelligence — REO/default servicing job postings as leading indicator of volume increases	2
PropStream	Enhanced agent + property data to enrich existing contacts	2

5. HubSpot Pipeline — 10 Stages

Every agent contact moves through a single linear pipeline. Stage changes trigger automation workflows and task creation.

#	Stage	Trigger / Description	Auto Action
1	Lead Identified	Contact created in HubSpot from lead source (AI Zillow detection or manual)	Enroll in Status 4 sequence (Day 3 email)
2	First Call Attempted	Rep logs at least one outbound call attempt	Task: follow-up call in 3 days
3	Contact Made	Live conversation or email response received	Workflow 0 fires — unified listing congrats email
4	Email Verified	Agent's email confirmed in MS system	Unenroll from Status 3 sequence; send welcome email

5	Portal Invitation Sent	Rep has sent registration invite	Enroll in invitation follow-up sequence
6	Registered in MS System	Agent account created and verified	Sync Status 2/3 from MS platform; send welcome email
7	Logged In	Agent logs into MS portal for first time	Update to Status 2; enroll in first-order activation sequence
8	Opportunity Created	Rep documents a specific property opportunity	Task: follow-up in 2 days
9	First Work Order Submitted	Agent submits first order through MS platform	Update to Status 1; suppress ALL sales sequences
10	Active Client	Terminal sales stage. Agent is ordering client.	No sales automation. Account management only.

6. Automation Workflows

Key rule: Workflow 0 fires at Stage 3 (Contact Made) for ALL non-active-client statuses. Status-specific sequences begin at Day 3 to prevent double-emailing on the same day.

Workflow 0 — Contact Made: Unified Congrats Email (fires for all non-Active statuses)	
Trigger	Pipeline stage = "Contact Made" AND ufs_agent_status ≠ "Active Client"
Action	Send W0-Email-1: warm intro email — "Great speaking with you — here's how we can help." Includes account setup offer, Client Registration link, Help Center link.
Timing	Day 0: Fires immediately on stage change. Once per contact — never repeats.
Suppression	Does NOT send if: Status = Active Client OR sales_messaging_suppressed = true OR work_order_count ≥ 1

Rule 1 — Active Client (Highest Priority — Immediate Suppression)	
Trigger	work_order_count ≥ 1 (synced from MS platform)
Action	Set ufs_agent_status = "Active Client". Unenroll from ALL active sequences. Set sales_messaging_suppressed = true. Move to Stage 10.

Timing	Fires within seconds of MS platform sync. No delay.

Rule 2 — Status 2 Sequence (Registered & Logged In → First Order)	
Trigger	ufs_agent_status = "Registered & Logged In" AND work_order_count = 0
Sequence	Day 3: Activation email ("Ready to submit your first order?") · Day 10: Follow-up email (market check-in) · Day 17: Create task for rep — personal call
Exit	work_order_count ≥ 1 → immediate suppression via Rule 1

Rule 3 — Status 3 Sequence (Registered, Not Verified → Verify)	
Trigger	ufs_agent_status = "Registered, Not Verified"
Sequence	Day 3: Verification nudge · Day 6: Follow-up · Day 10: Reminder · Day 13: Create task for rep
Exit	email_verified = true → unenroll, move to Status 2 or Status 4 logic

Rule 4 — Status 4 Sequence (Not Registered → Register)	
Trigger	ufs_agent_status = "Not Registered"
Sequence	Day 3: Intro email ("Quick Intro — United Field Services" — new template) · Day 8: Follow-up · Day 15: Final attempt · Day 18: Create task for rep; move to newsletter list
Exit	ms_platform_registered = true → unenroll, move to Status 3 or Status 2

Email Timing Summary (All Rules)

Day	Status 4 (Not Registered)	Status 3 (Not Verified)	Status 2 (Logged In)
Day 0	Workflow 0 fires on Contact Made — unified email for all non-active statuses		
Day 3	Intro email (new template)	Verification nudge	First order activation email

Day 6–8	Follow-up #2	Reminder email	—
Day 10	—	Final reminder	Market check-in email
Day 13–15	Final attempt	Rep task created	—
Day 17–18	Rep task → nurture	—	Rep task created

7. MS Platform ↔ HubSpot Data Sync

The MS platform must push the following events to HubSpot in real time via webhook or API. HubSpot uses these updates to trigger status changes and workflow enrollment.

Zillow AI System → HubSpot (Lead Entry)

AI Detection Event	HubSpot Fields Set	Resulting Action
New REO listing detected on Zillow	First/Last name, Email, Phone, lead_source = "Zillow", ufs_agent_status = "Not Registered", zillow_property_address, zillow_listing_date	Contact created (or updated if exists). Enroll in Status 4 sequence. Auto-assign sales rep.

MS Platform → HubSpot (Registration & Activity Events)

MS Platform Event	HubSpot Field Updated	Resulting Action
Agent completes registration	ms_platform_registered = true	Enroll in Status 3 or 2 sequence
Agent verifies email	email_verified = true	Exit Status 3 sequence
Agent verifies phone	phone_verified = true	Update contact record
Agent first login	ms_last_login_date = [date]	Update to Status 2, enroll activation sequence
Work order submitted	work_order_count + 1	Rule 1 fires → Status 1, suppress all sales
Work order completed	last_order_completed_date = [date]	Update contact record
client_type set at registration	client_type = "REO" (Phase 1)	Mailchimp tag applied for newsletter segmentation

HubSpot Custom Properties Required

Property Name	Type	Purpose
ufs_agent_status	Dropdown	Drives all workflow routing

ms_platform_registered	Boolean	Synced from MS platform
email_verified	Boolean	Synced from MS platform
phone_verified	Boolean	Synced from MS platform
ms_last_login_date	Date	Synced from MS platform
work_order_count	Integer	Synced from MS platform
last_order_completed_date	Date	Synced from MS platform
client_type	Dropdown	REO / Property Mgmt / HOA (Phase 2)
lead_source	Dropdown	Zillow / Manual
sales_messaging_suppressed	Boolean	Master kill switch for all sales automation
assigned_sales_rep	Text	Rep assigned to this contact
zillow_property_address	Text	Most recent REO listing address detected via Zillow AI system
zillow_listing_date	Date	Date AI system detected the REO listing on Zillow

8. Duplicate Lead Handling

Lead generation frequently returns the same agents from multiple sources. Deduplication must run at every entry point.

Scenario	Rule
New lead matches existing HubSpot contact (email)	Merge into existing record. Update lead_source to append new source. Do not create duplicate.
New lead matches by phone (email differs)	Flag for manual review. Create task for rep. Do not auto-merge.
Same agent imported from two sources on same day	Keep first record. Discard second. Log the discarded source in notes.
MS platform registration matches existing HubSpot contact	Link MS account to existing HubSpot contact. Update status fields. Do not create duplicate HubSpot record.
Active Client is re-detected by AI as a new lead	Match on email → existing record is Status 1. Do not enroll in any new sequence. Log the source in notes.

9. The Disposition Desk — Weekly Newsletter System

The Disposition Desk is UFS's weekly REO industry intelligence newsletter sent via Mailchimp every Tuesday at 9AM. The email teaser links back to full articles gated behind the MS platform login — driving portal logins and conversions at every status level.

Two-Layer Content Model

Layer 1 — Mailchimp Email Teaser

Sent to ALL contacts in the Mailchimp audience (regardless of MS platform status). Contains 2–3 sentence previews of each article with a "Read More →" button that links to the full article on the MS platform. Goal: Drive click-through to the portal. Unverified / unregistered agents get redirected to register or verify.

Layer 2 — Full Article on MS Platform

Full article lives in the "Content Section" of the MS platform. Requires login to read. Agents who aren't logged in see a prompt to register/verify/log in before accessing content. Goal: Drive portal logins, email verifications, and account activations as a side effect of reading industry content.

Portal Redirect Logic by Agent State

Agent Clicks 'Read More'	Agent State	What Happens
Clicks article link in email	Logged in (Status 1 or 2)	Goes directly to full article
Clicks article link in email	Registered but not logged in	Redirected to login page → then article after login
Clicks article link in email	Registered, not verified (Status 3)	Redirected to email/phone verification page
Clicks article link in email	Not registered (Status 4)	Redirected to registration page

Newsletter Content Structure (Weekly)

Section	Content	Data Source
📊 Market Pulse	Weekly REO volume, foreclosure activity, key market indicators	Zillow data, public foreclosure data, AI-aggregated sources
🏦 Top Banks Listing	Which banks/servicers listed the most REO this week; geographic breakdown	Zillow REO listing data (AI-monitored)
📍 Hot Markets	Top 5 counties/metros with highest REO activity this week	Zillow REO listing data, public foreclosure data
📰 Industry News	Regulatory changes, servicer announcements, market trends	Curated news + AI summary
💼 UFS Spotlight	Always ends with a subtle UFS service highlight or client success story	Internal
🏦 Bank Hiring Intel (Monthly)	Which banks are posting REO/default servicing jobs — leading indicator of volume	Indeed / Apify job scraper (Phase 2)

Weekly Automation Pipeline

- Friday AM: Data sources pulled automatically → AI drafts newsletter content
- Friday PM: Human receives approval notification → reviews draft in approval tool
- Mon–Tue AM: Human approves (or requests edits) → approved = auto-scheduled
- Tuesday 9AM: Newsletter sends via Mailchimp to all segmented audiences

10. MS Platform — Content Section Architecture

Content Post Data Model

Field	Type	Notes
title	String	Article headline
teaser	Text (2–3 sentences)	Used in Mailchimp email
body	Rich text	Full article — login-gated
publish_date	Date	Scheduled publish
audience_tag	Array: [REO, Property Mgmt, HOA, All]	Phase 2 filtering. Phase 1: always "REO"
newsletter_issue	Reference	Links to newsletter send record

Content Access Rules

- Full article content requires authenticated session (logged-in user)
- Unauthenticated users redirected to registration or login (see redirect logic in Section 9)
- Phase 2: filter article visibility by client_type matching audience_tag

11. Client Type Field at Registration

Phase 1: Build the client_type field now with only "REO" as the option. This prevents retrofitting the field in Phase 2. The field should appear at registration but can be pre-selected or defaulted to "REO" in Phase 1.

Phase	client_type Values	Newsletter Visibility
Phase 1 (now)	REO	All content tagged "REO" or "All"
Phase 2	REO, Property Management, HOA	Content filtered by client_type matching audience_tag

The client_type field syncs from MS platform → HubSpot → Mailchimp as an audience tag, enabling segmented newsletter sends in Phase 2 without any architecture changes.

12. Tech Stack

Tool	Purpose	Phase
HubSpot	CRM, pipeline management, automation workflows, task creation, email sequences	1
MS Platform (existing)	Client portal — registration, verification, login, work order management	1
Mailchimp	Newsletter sends, audience management, HubSpot native connector sync	1
HubSpot-Mailchimp Connector	Native integration — syncs HubSpot contacts/properties to Mailchimp audience + tags	1
Webhook / REST API	MS Platform → HubSpot real-time event push	1
Zillow API / Data Feed	Sole lead source — real-time REO listing data including agent name, contact info, property address, listing date	1
AI REO Detection System (Build)	Monitors Zillow for new REO listings → extracts agent + property data → auto-creates/updates HubSpot contacts via API	1
AI Draft Tool (TBD)	Weekly newsletter content drafting from Zillow data and public foreclosure sources	1
Approval Workflow Tool (TBD)	Newsletter human approval step before send	1
PropStream	Enhanced agent data enrichment (future)	2
Indeed / Apify	Bank hiring intelligence scraper for newsletter "Bank Hiring Intel" section	2

13. IT Requirements

Priority legend: Blocker — must be done before system can operate | Important — needed for full functionality | Can wait — Phase 2 or enhancement

AI Lead Capture System — Zillow REO Detection

Build AI-powered Zillow REO monitoring system
System must monitor Zillow in real time (or near-real time) for new REO / bank-owned listings. When detected: extract listing agent name, email, phone, property address, and listing date. Architecture TBD (Zillow API, scraper, or third-party data feed).

Build HubSpot contact creation/update from AI detection
On each REO detection: (1) Check HubSpot for existing contact by email. (2) If new: POST to HubSpot API — create contact with all extracted fields + lead_source = "Zillow" + ufs_agent_status = "Not Registered". (3) If existing: PATCH to update zillow_property_address, zillow_listing_date, append listing activity to notes. (4) Trigger enrollment in Status 4 outreach sequence.

Zillow data access method — confirm with IT
Options: (a) Zillow API (requires Zillow partnership/account), (b) third-party Zillow data provider (e.g., Bridge Interactive), (c) scheduled scraping solution. Must be confirmed before build begins.

○	**Deduplication: AI-detected vs. manually entered leads** If a contact already exists in HubSpot (manual entry or previously active), the AI detection event should update the record rather than create a duplicate. Append new Zillow listing data to the existing contact.
○	**Error handling and monitoring for AI detection system** Alert IT or ops team if Zillow data feed goes down or if HubSpot API pushes begin failing. Log all detection events for audit trail.

HubSpot Configuration

●	**Create all custom contact properties** ufs_agent_status, ms_platform_registered, email_verified, phone_verified, ms_last_login_date, work_order_count, client_type, lead_source, sales_messaging_suppressed, assigned_sales_rep, zillow_property_address, zillow_listing_date
●	**Build 10-stage REO pipeline** Create pipeline with all 10 stages as defined. Configure stage transitions.
●	**Configure Workflow 0 (Contact Made)** Trigger: stage = "Contact Made" AND status ≠ Active Client. Action: send unified congrats email. Suppression: Active Client, sales_messaging_suppressed, work_order_count ≥ 1.
●	**Configure Rules 1–4 automation workflows** Status-based enrollment with correct timing. Rule 1 must have highest priority and fire without delay. All rules must check suppression before sending.
●	**Build all email templates in HubSpot** All stage emails including the updated initial email template (see Section 16). Include Client Registration and Help Center links.
○	**Configure task auto-creation rules** Automated task creation at Day 17–18 for Status 2/4 sequences when agent hasn't converted.
○	**Configure duplicate detection rules** Match on email address. Alert on phone match. Auto-merge rules as per Section 8.

MS Platform Integration

●	**Build webhook/API: MS Platform → HubSpot** Push registration, email verification, phone verification, first login, work order count updates in real time.
●	**Add client_type field to MS registration form** Phase 1: pre-populated as "REO". Phase 2: dropdown. Syncs to HubSpot and Mailchimp.
●	**Build article redirect logic** When unauthenticated user hits a content article URL: not registered → registration page; not verified → verification page; not logged in → login page → article after login.
○	**Build Content Section in MS platform** Article data model (title, teaser, body, publish_date, audience_tag). Login-gated full content view. Phase 2: filter by client_type.
○	**Enable rep-initiated account creation**

	Allow sales reps to create a client account in MS platform on behalf of the agent (setting email + phone). Agent receives verification link to confirm and set password.

Mailchimp / Newsletter	
◍	**Configure HubSpot-Mailchimp native connector** Sync all marketing-eligible contacts. Sync client_type as Mailchimp tag. Sync ufs_agent_status. Configure suppression for Status 1 from sales sequences — but keep on newsletter list.
◍	**Build Mailchimp newsletter template** Branded Disposition Desk template with 5 content sections. Teaser format with "Read More →" link to MS platform article URL.
◍	**Build weekly automation + approval workflow** Friday AM data pull → AI draft → human notification → approval interface → Tuesday 9AM scheduled send.
◍	**Phase 2: Audience segmentation by client_type** Filter newsletter content sections by client_type (REO vs Property Mgmt vs HOA) using Mailchimp segments.
◍	**Phase 2: Bank hiring intelligence data pipeline** Indeed / Apify job scraper for REO/default servicing job postings. Monthly "Bank Hiring Intel" section in newsletter.

14. Implementation Phases

Phase 1 — Core Pipeline & Automation (Build First)

- ◍ Critical Path: AI-powered Zillow REO detection system — monitors Zillow, captures listing agent data, auto-creates contacts in HubSpot
- HubSpot: all custom properties, 10-stage pipeline, all 4 workflow rules + Workflow 0
- HubSpot: all email templates built and linked to workflows (including updated initial email)
- MS Platform: webhook → HubSpot data sync (registration, verification, login, work orders)
- MS Platform: client_type field at registration (default: REO)
- MS Platform: rep-initiated account creation with verification link send
- HubSpot-Mailchimp: native connector configured, audience sync active
- Sales team training on 10-stage pipeline + calling scripts

Phase 2 — Newsletter System (The Disposition Desk)

- MS Platform: Content Section built with article data model and login-gate redirect logic
- Mailchimp: Disposition Desk branded template built
- Data pipeline: automated weekly data pull from Zillow AI system and public foreclosure data
- AI drafting + approval workflow tool configured

- Tuesday 9AM scheduled send automation live

Phase 3 — Multi-Client Type & Advanced Intelligence

- client_type dropdown expanded (Property Management, HOA)
- Mailchimp audience segmentation by client_type
- Content Section: audience_tag filtering by client_type
- Bank hiring intelligence: Indeed/Apify job scraper + monthly newsletter section
- PropStream lead data integration for enhanced agent sourcing

15. Sales Rep Playbook — Stage Scripts

Each of the 10 pipeline stages has a dedicated calling script, voicemail, objection handlers, and email templates. The full interactive playbook is in the companion file. Key account setup offer used in Stages 1–5:

★ Key Offer (use in every Stage 1–5 call): "I can go ahead and set up your account for you right now while we're talking — all you need to do is verify your email and phone number and set a password. Takes about 60 seconds." This removes all registration friction and is the single highest-converting offer in the pipeline.

Stage	Call Goal	Email Goal
1 — Lead Identified	Cold intro + offer to set up account	Intro email with account setup offer (new template)
2 — First Call Attempted	Follow-up + repeat setup offer	Follow-up with setup offer + direct registration link
3 — Contact Made	Discovery + set up account on call	Warm post-contact email with registration + help links
4 — Email Verified	Nudge verification click	Verification reminder with help center link
5 — Invitation Sent	Follow up on invite + setup offer	Two-path email: DIY or "set me up"
6 — Registered	Welcome + first login walkthrough	Welcome email with login link
7 — Logged In	First order push — offer to submit together	First order activation email
8 — Opportunity Created	Convert specific property to first order	Personalized opportunity follow-up
9 — First Work Order	Celebration call + set expectations	Order confirmed + next steps
10 — Active Client	Account management — retention + referrals	Quarterly check-in (NO sales automation)

Stage 10 Absolute Rule: Active Clients (Status 1) must receive ZERO automated sales or marketing emails. HubSpot suppression must be enforced at the workflow level. Account management emails are sent manually by the assigned rep only.

16. Email Templates — Approved Versions

The following are the approved outgoing email templates. All emails use linked text (not raw URLs) for registration and help center links.

Reference Links (use in all emails)

Client Registration: clients.unitedffs.com/register/client
Help Center: unitedffs.com/help-center-for-clients/
Client Portal: clients.unitedffs.com

Stage 1 — Initial Cold Email (UPDATED)

Day 0 · Status 4 — Not Registered

Subject: Quick Intro — United Field Services

Hi [First Name],

I just tried giving you a call and wanted to introduce United Field Services (UFS).

We work with REO agents, banks, and asset managers, helping handle the field services side of their business — things like property inspections, occupancy checks, maintenance, and preservation orders.

If it's easier, I can set up your account in our system for you right now — no forms to fill out. Once I add you, you'll receive a link where you just verify your email and phone number and set a password. It takes about 60 seconds.

Or register directly here: [Client Registration → clients.unitedffs.com/register/client]

If you have any questions, feel free to reply or give me a call. Our help center also has step-by-step guides: [Help Center → unitedffs.com/help-center-for-clients/]

[Your Name]
United Field Services | [Phone] | [Email]

Stage 2 — Follow-Up Email

Day 3–5 · Status 4 — Not Registered

Subject: Following up — United Field Services

Hi [First Name],

Tried you again by phone — just wanted to make sure my last note didn't get buried.

We work with REO agents, banks, and asset managers handling the field services side of their properties — inspections, occupancy checks, maintenance, and preservation orders.

If it's easier, just reply and I'll set your account up on my end. You'll receive a link to verify your email, phone, and set a password — takes about 60 seconds. No forms to fill out.

Or register directly: [Client Registration → clients.unitedffs.com/register/client]

[Your Name]
United Field Services | [Phone]

Stage 2 — Final Attempt Email

Day 8–10 · Status 4 — Final Touch

Subject: Last note from me — UFS field services

Hi [First Name],

I've reached out a couple times and don't want to keep pestering you — this will be my last note for now.

If the timing is ever right for a reliable field services partner for your REO properties, I'd love to connect. You can register anytime: [Client Registration → clients.unitedffs.com/register/client]

Or reply to this email and I'll get you set up in about 2 minutes — just need to verify your email, phone, and set a password.

Wishing you a great REO season.

[Your Name]
United Field Services | [Phone]

Workflow 0 — Contact Made Email (Fires automatically at Stage 3)

Day 0 · Fires automatically when stage = Contact Made (all non-Active statuses)

Subject: Great speaking with you — United Field Services

Hi [First Name],

Really enjoyed connecting with you today!

As promised — we work with REO agents, banks, and asset managers handling the field services side of their properties: inspections, occupancy checks, maintenance, and preservation orders.

Here's how to get started:
- Register / verify your account: [Client Registration → clients.unitedffs.com/register/client]
- Questions? Our help center walks through everything: [Help Center]

Once your account is verified (just email + phone + password), you can submit orders, track them in real time, and pull documentation ready for your asset manager.

[Your Name]
United Field Services | [Phone] | [Email]

See the companion file UFS_Stage_Scripts_and_Emails for all 10 stage email templates with full calling scripts, voicemails, and objection handlers.

17. Open Items for IT Meeting

#	Question	Owner	Status
1	What is the Zillow data access method for the AI REO detection system? (Zillow API partnership, Bridge Interactive, scraping, or other third-party feed?)	IT	Open — BLOCKER
2	What is the MS Platform → HubSpot integration method? (Webhook, Zapier, native API, custom?)	IT	Open
3	Can sales reps create agent accounts in MS platform on behalf of the agent? What access level is required?	IT / Platform	Open
4	What is the exact URL structure for MS platform article links? (Needed for Mailchimp newsletter links)	IT	Open
5	Will the approval workflow for newsletter drafts use an existing tool (email, Slack, internal) or does a new tool need to be built?	Marketing / IT	Open
6	What AI tool will be used for newsletter content drafting and REO detection? (OpenAI API, Claude API, other?)	IT	Open
7	HubSpot plan confirmation — does current plan support custom workflows + Mailchimp native connector?	IT / Admin	Open
8	Is the client_type field at MS registration a free-text input or dropdown in Phase 1? (Recommend dropdown pre-filled with "REO")	IT	Open
9	Timeline for Phase 1 completion target? Note: AI Zillow detection system is the critical path item.	All	Open

United Field Services — Master IT Build Brief v1.1 · March 2026 · Confidential
